

PROJECT ENGINEER

Ports North is responsible for the development and management of port infrastructure and facilities vital to the economic growth of Cairns and regional centres in Far North Queensland. The Corporation has extensive property, marina, tourism and cargo facilities in Cairns and its regional ports.

An exciting opportunity exists for a forward thinking, proactive and experienced Project Engineer to join the Planning and Infrastructure team. Reporting to the General Manager Planning and Infrastructure you will assist in planning and engineering activities including the delivery of capital and major maintenance projects and ongoing works programs.

The position requires a highly motivated Civil Engineer with 5-10 years' experience in scoping and management of capital works and maintenance programs together with cost and program management.

An ability to manage a number of projects simultaneously while maintaining effective relationships with internal and external stakeholders is essential as is having strong technical and computer skills.
